

Whole Cell Gently Crushed Grains Feed for Chickens, Beef Cattle, Dairy Cattle, Horses, Goats and Pigs

When **feeding Whole Cell Gently Crushed Grains** with a higher protein and nutritional value, to livestock, the results are

- Less feed / grains needed per feeding
- Livestock is much healthier and waste is less toxic.

The percentage of protein in grain is affected by the way the grain is processed, as is the same with all of the nutrients within the grain.

Since the **Whole Cell Gently Crushed Grains** are gently crushed in stages they don't lose their natural nutrition and the vitamins and minerals are more readily available for the body to use.

Whole Cell Gently Crushed Grains Feed for:
Goats Turkey
Horse Beef Cattle
Chicken Layer Chicken Broiler
Dairy Cattle, Pig, Colt, Deer

Incremental Gentle Crushing is a grain processing revolution , **Patented Process !!**

No heat is used so grain retains **ALL** its **Live Nutrition!**

The grain cell remains **WHOLE**. No Oxidation of cells. Easily Digested !

All Nutrition remains in product, unlike traditional grinding that destroys grain cells.

Our Variety of **Feed Mixes** consists of grains grown to organic standards , chemical free, No preservatives.

Gently Crushed Corn, Gently Crushed Wheat, Gently Crushed Sunflowers, Gently Crushed Flax, Gently Crushed Buckwheat.

- **Each grain is Gently Crushed**, without destroying the cell, preserving the germ pouch, which extends the shelf life of the grain.
- **Whole Cell Gently Crushed Grains** have the ability to decrease the amount of grain needed to satisfy your flock.
- **The amount of manure produced** during their life cycle will be less. The amount of toxins produced by the manure will be less due to the smaller particle size which enables the digestive system to more completely digest the grain before it is produced as waste.
- Since there are no broken cells the product will not go

Modern day cutting mills produce high temperatures that kill most of the viable nutrients causing the remaining product to be nutritionally void

- **The Gentle Crushing process** eliminates the need to separate or add nutrients that are natural to the product.
- **The nutrient value** is protected in all forms of grain.... Corn, Wheat, Rice, Rye, Flax, etc.
- **Eliminates the need to use** artificial fillers, preservatives or other foreign nutrients while increasing the amount of usable grain.
- **Testing from Windsor Laboratories** confirms that the largest particle size contained most of the germ pouches. Also, after gently crushing the corn, there were no cells that were destroyed. These two facts explain that the shelf life of the gently crushed products is significantly longer than the normal grains without being processed. This is also the reason Gently Crushed Grains do not have to be processed which is the key to the health benefits and it's ability to retain it's God given nutrients.
